NeuroVision AI

AI MRI Analysis Summary

SCAN-E1730737 | 19 Oct 2026, 17:40 UTC
Analysis UUID: e1730737-3ad9-4cbe-bb35-da19b4627a2e
Model: Swin-Tiny U-Net | Inputs: FLAIR + T1ce | Output: WT / TC / ET
Version: TEST-FIXTURE-NOT-TRAINED
Slice 1 of 4 | Threshold: 0.50

Original FLAIR (model grid)

Segmentation overlay (65% opacity)

Region	Peak segmentation probability	Model-grid voxels
WT	52.21%	42812
TC	45.21%	0
ET	51.74%	92120

WT: cyan; TC: amber; ET: magenta. Regions overlap and are not additive. Probabilities are uncalibrated segmentation statistics, not diagnostic certainty. Counts use the resized model grid and are not physical tumor volumes.

Experimental AI output

This software is intended for research and educational use only. Outputs are generated by an experimental machine-learning model and must not be interpreted as a medical diagnosis or used as the sole basis for patient-care decisions. Clinical interpretation should be performed by qualified healthcare professionals.
